

WindEurope Conference & Exhibition 2019

Bilbao, 2-4 April 2019

Prospects for wind in Spain are looking bright again with national plans to build more than 4 GW of onshore wind by 2020, and 2.5 GW a year up to 2030. Even floating offshore wind is on the agenda.

With 1090 wind farms in more than 800 locations and a supply chain that employs more than 22000 people, Spain is among the five countries in the world with the most accumulated installed power and will receive the sector's main agents at the [Wind Europe Conference & Exhibition 2019](#) between 2 and 4 April.

SKF invites you to visit our stand, talk to our experts and learn about all the engineering and O&M solutions that can help you solve your daily challenges.

We also inform you that [Mr. Raimond Breuker](#), Director Energy Industries in SKF, will deliver the lecture "[Becoming circular: turbine components recycling](#)" on April 4 at 15:00 in Auditorium 2.
